13 March 1975

Dear Sam

The minutes of the meeting in the Cabinet Office on 28 February call for a note describing, in scientific terms, the proposed programme of the Joint Laser Laboratory. Discussions have taken place between the Harwell and Rutherford Laboratory staff involved and, as a result, Lomer has sent a draft to the AEA London Office. I enclose a draft written in similar terms which you may like to use in responding on behalf of the SRC. If you feel that there is insufficient scientific information in the note, you might consider incorporating material from the Science Board paper SB 2/75 'Policy and Programme Statement of the Science Board 1974' where the basic research opportunities at the Laser Laboratory are described in more detail (relevant sections attached).

Yours sincerely

G H Stafford
