RUTHERFORD LABORATORY BUILDING COMMITTEE

EXTENSION TO BUILDING R.8

INTRODUCTION

The present male toilet and messroom facilities in R.8 are inadequate for the staff now proposed to occupy the building. This is partly due to changes in the use of the building and partly due to the additional mezzanine floor. There is at present no provision for female toilets. The new proposal will give permanent facilities for some of the staff at present temporarily accommodated in the Experimental and Parasitic Areas in addition to those already occupying R.8.

PROPOSAL

The attached sketch shows the proposed layout for a small extension linking R.8 with R.10. This includes a mess room, male toilet and locker room; also it is proposed to convert the existing male toilet into a female toilet and calorifier room.

ESTIMATE

The estimate for this work prepared by Southern Works Organisation is £4,500 less fees.

Approval is sought to commence work immediately.
